Updated April 2013

¹Wellhead Protection (WHP) plans are developed with technical and financial assistance provided through state and federal funding. Some community WHP plans were developed and implemented for multiple public water systems.

²State endorsement is granted to WHP plans that meet specific criteria set by the State. A number of plans, developed through separate funding sources or prior to the establishment of endorsement criteria, have not yet satisfied state endorsement criteria as of this reporting.

³State-endorsed WHP plans are eligible to receive assistance from the State WHP Program to implement protection activities at the local level.

⁴Implementation of the Watershed Control Program (WCP) is enforced by the Bureau of Safe Drinking Water for surface water systems receiving filtration avoidance (NAC 445A.525).

⁵The Source Water Protection (SWP) implementation tally represents the sum of WHP and WCP implementation.
